

# Yahoo & AOL Mail Setup

1. If you don't have an email account create one. Then Log into your mail account.
2. Click on your user, located in the upper right corner. You may be asked to login again.

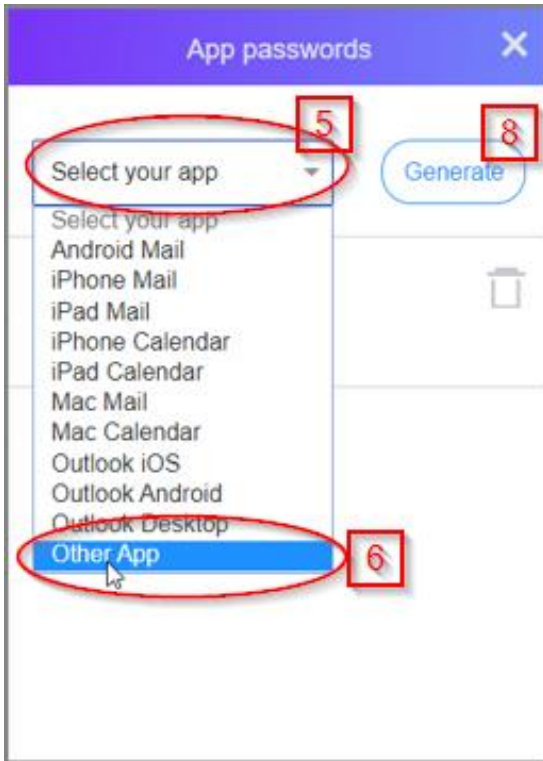

3. Click on Account Security.

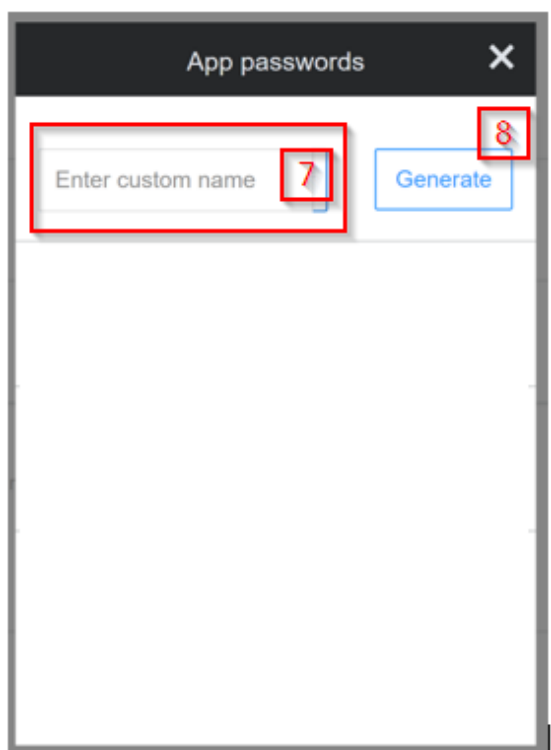

4. At the bottom click on Manage app passwords.

5. Expand select your app.
6. At the bottom of the list select "Other App".

7. Enter the custom name "Data Demon".
8. Click [Generate](#).

9. Copy the app password and paste it into Data Demon's mail setup password.  
It is normal for the spaces in the password to be removed when it is copied.

### Yahoo Mail settings

SMTP Server: smtp.mail.yahoo.com Port: 587

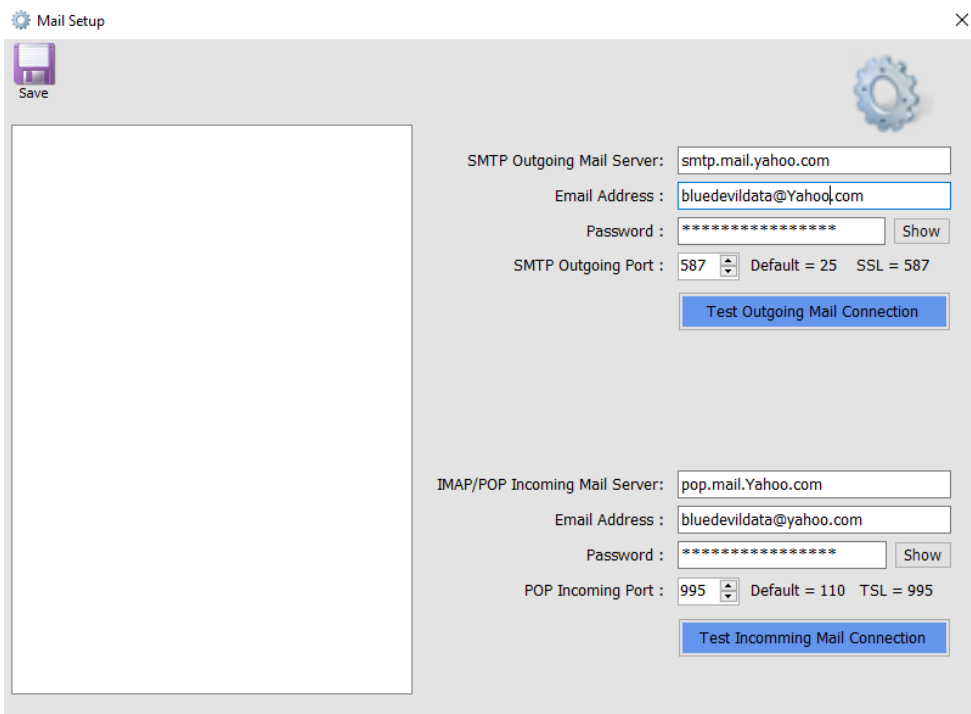

POP Server: pop.mail.yahoo.com Port: 995

### AOL Mail settings

SMTP Server: smtp.aol.com Port: 587

POP Server: pop.aol.com Port: 995

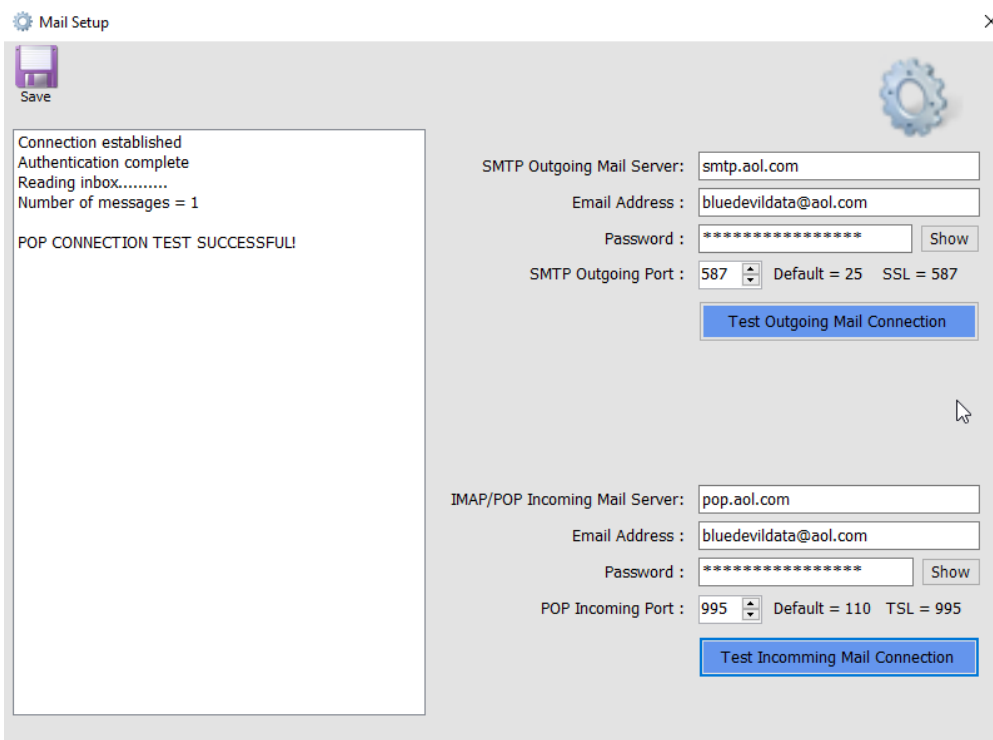

# Yahoo Mail

The screenshot shows the 'Mail Setup' window for Yahoo Mail. On the left, there is a 'Save' button and a large empty white box. On the right, there are two sections for mail server configuration. The top section is for the SMTP Outgoing Mail Server, with fields for 'SMTP Outgoing Mail Server' (smtp.mail.yahoo.com), 'Email Address' (bluedevildata@yahoo.com), 'Password' (masked with asterisks), and 'SMTP Outgoing Port' (587). Below these fields are 'Test Outgoing Mail Connection' and 'Show' buttons. The bottom section is for the IMAP/POP Incoming Mail Server, with fields for 'IMAP/POP Incoming Mail Server' (pop.mail.Yahoo.com), 'Email Address' (bluedevildata@yahoo.com), 'Password' (masked with asterisks), and 'POP Incoming Port' (995). Below these fields are 'Test Incoming Mail Connection' and 'Show' buttons. A gear icon is in the top right corner.
